The following reports concerning the Pacific Proving Grounds, the Bravo Test and the subsequent events are in the public domain. Those referenced 409901 are placed first.

The bibliography under Published Reports and Articles in Medical Journals below is not complete. Papers have been omitted which dealt with the development of techniques used in the laboratory or have reported some aspect of the study which has a limited or specific scientific interest. Also omitted are reprints of speeches made by members of the teams at various times and places. On the other hand the reluctance of editors or biomedical journals to publish bulk data has caused Dr. Conard to record summarized versions of the bulk data of a survey or group of surveys as Brookhaven National Laboratory. These can be used as source books and in fact have been so used by agencies such as the United Nations. Subjects of special interest to medicine and radiation biology have been developed from the data in these source books and published in the journals and proceedings referenced.
