February 12, 1954

Mr. A. J. Breslin
c/o HQ Joint Task Force #7
APO 187 (HOW)
Postmaster
San Francisco, California

Dear Al:

I gather from the dispatches of the last few days that you have cleared the hurdle imposed by mis-shipment of the instruments. I'm glad Harley could be diverted to help out.

My main purpose in writing is to bring you up to date on the matter of the oil slick experiments which we call Project NICK. I hope that various dispatches pertaining to the procurement and "un-procurement" of the various oils has not upset your routine too much. I know how confusing it can be to receive the kind of information we have been giving you without knowing what is going on back at the Laboratory.

The facts as of this minute are as follows: - By this time you should have received the operation instructions we planned for an experiment to be held off Long Island. It will delight you to know that we have had 45 miles an hour winds in 15° temperatures in the last few days with little prospect for improvement.

Fresco left as scheduled in a PC but the seas were so bad that operations were out of the question and they returned after two days. As of now, we are attempting to conduct the experiment in the Gulf of Mexico, but I doubt that this can be completed for another few days. We do not want to say that this method of survey is feasible until we have had a successful experiment at sea. By successful I mean that the oil slicks will support the 100 micron iron for at least 24 hours and that the radiation levels from a reasonable diameter slick (about 100 ft.) can be read from the air.

With respect to the confusion about the oil, we find that the standard Navy fuel is a satisfactory alternative to our earlier specifications. This fuel is designated as Navy Special Fuel. It should be available

1

ANNAL

A. J. Breslin

- 2 -

February 12, 1954

at 5¢ a gallon in the Forward Area.

The question of how to lay the oil slick troubles us. Until we have had an experiment on the open water, we won't know how much oil will be required but we think it will be between 25 and 50 gallons per slick. We need ideas on how to lay the oil and in this connection I see two problems:

1. How adequate is the knowledge of ocean currents in the area, and when and where must the slicks be laid in order to have them downwind in the region of expected fallout at the proper time.
2. Is the scheme feasible from the point of view of the mechanical problem of dropping oil?

If our experiment on the open water is a failure, we will notify you promptly and the deal is off. If the experiment is successful, Dr. Bugher will write to General Clarkson explaining the importance of obtaining fallout measurements in the downwind region from 50 to 300 miles and will request that every effort be made to obtain data.

The shot schedules being what they are, there is no urgency about including this program for the first shot or two although it will certainly be desirable to obtain data for as many shots as possible.

Perhaps you have begun to consider the techniques of laying the oil? Could the oil be loaded into empty mine cases and dropped mechanically from a P2V bomber?

I have not as yet made definite plans to come out, but if I do, it will be towards the end of March. Should an urgency develop in your opinion, I could of course come forward on short notice at any time.

Best regards to you and Mel.

Sincerely,

Merrill Eisenbud, Director
Health and Safety Laboratory

10-11-12

SECRET

4. General Plan.

a. Aerial monitoring of the Pacific Area will be again conducted by aircraft operating from Kwajalein, Guam and Oahu. Support of the stations at Kwajalein and Guam will be provided by patrol aircraft from the Navy at Oahu by aircraft from VW-1.

b. Basic flight patterns adapted for IVY (reference (b)) are understood and have been reproduced by the AEC in the SOPs mentioned in paragraph 1 above. Deviations from these patterns are authorized if decided by the Project Officer.

c. AEC representatives for this program have been assigned to temporary duty with Joint Task Force SEVEN in the Eniwetok/Bikini area. As listed in reference (a), these representatives are:

- | | |
|-----------------------|---------------------------|
| (1) Mr. A. J. Breslin | Project Officer |
| (2) Mr. M. F. Cassidy | Assistant Project Officer |

d. During aerial monitoring operations, radiation measurements will be made by aircraft crews rather than by AEC representatives. This change is justified by the relative ease of measurements demonstrated during IVY, and further simplification of the equipment for CASTLE. These aerial scintillation instruments (SCINTAMETER) are being assigned to participating squadrons by the AEC Project Officers who are instructing squadron personnel regarding their use.

e. Monitoring flights will be requested subsequent to each AEC detonation by the Project Officer on the basis of post shot reports. After each detonation, certain survey flights may be eliminated if ground installations confirm meteorological predictions that a cloud in a given area is unlikely.

f. Ground monitors are being installed at Truk, Yap, Pohnpei, Kusaie, Majuro, Rongerik, Ujae, Wake and Midway. At these stations, automatic recorders will continuously monitor gamma radiation and count and concentration of airborne radioactive dust. Arrangements have been made for the attendance of this equipment by Weather Service or Air Force personnel as appropriate. The exception to this arrangement is Hawaii, where it is desired that naval station personnel supervise the installation. In addition to the above network, the U. S. Air Force (AFQAT-1) has been requested to augment gamma monitoring by reporting from stations at Oahu, Guam, Iwo Jima, and possibly Okinawa, Shemya and Sandoragga.

SECRET

~~SECRET~~

g. In the event of special circumstances such as extensive fallout in a single area or equipment failures, AEC Project Officers may require high priority air transportation to that location. Such requests should be approved when feasible.

h. Mr. Breslin, as Project Officer, will keep CINCPAC PAC-1 informed concerning the progress of the program through normal service communication channels. Reports from ground monitoring stations and squadron reporting airborne survey will be transmitted to the Project Officer for evaluation. Messages from the Project Officer to CINCPACFLT should include the following types of information:

- (1) Proposed schedule of requisite airborne monitoring flights subsequent to each shot.
- (2) Completion of airborne monitoring flights including a brief description of radiological conditions. Under normal circumstances, these readings are generally insignificant, this report should indicate the highest reading (mr/hr) noted and a statement that no significant radioactive conditions were encountered.
- (3) Unusual conditions, if any, recorded at ground monitoring stations.
- (4) Any special circumstances of interest to the AEC in the Pacific Area.

5. Program Details, Kwajalein.

a. References (d) and (e) pertain to completed messages from the AEC and CJTF 7 concerning JTF 7 support of the subject program. Reference (f) advised CJTF 7 that:

(1) For CAST B, it is planned to provide the aircraft capability for airborne fallout monitoring both at Guam and Kwajalein for each shot. After each shot, utilizing security aircraft (V2) as an AEC.

(2) For airborne survey in any area of the trust territory, it is planned to utilize 2 to 3 patrol aircraft (VP-2) operating from Guam and Kwajalein as needed to fulfill this mission.

b. It is requested that Commander Joint Task Force SI EN:

(1) Support the program outlined for Kwajalein with full support aircraft and facilities in accordance with previous agreements outlined in subparagraph 5.a. above.

~~SECRET~~

SECRET

(2) Release requisite security aircraft (VP-29) after removal from Task Group 7.3 to the temporary operational control of COMNAVSTA for post shot airborne surveys in the Marianas and Western Caroline Islands (if required).

(3) Conduct post-shot airborne surveys of the Marshall and Western Caroline Islands with VP-29 aircraft as requested by the AMC Project Officer.

(4) Transmit requisite information from the JEL People Station to CINCPACFLT.

a. It is desired that the Commanding Officer, Local Station (LST) in provide PBM flights as practicable to outlying geographic locations in the Marshall Islands. Since the installation at Jalauru is no longer operated and unattended, it is expected that at least one flight to this site will be required after each shot. The remaining installations in the Marshall Islands are located at Task Force Weather Islands and are attended by Task Force personnel. Therefore, flights to these sites are coordinated with normal PBM times scheduled for resupply of weather stations.

6. Program Details for Guam: It is desired that the Commanding Officer, Marianas support the subject program for Guam in a manner similar to that rendered during IVY. Specific requirements for IVY are:

a. The conduct of post-shot airborne surveys of the Western Caroline Islands with VP-29 aircraft (from Task Group 7.3) as requested by the AMC Project Officer.

b. Possible air transportation for the AMC Project Officer and his staff to and from the island for repair or maintenance of equipment and other support facilities. Reference (4) provides for preparation of a list of these sites.

c. The possibility that survey flights may be desirable in the Philippines with the cognizance of COMNAVSTA. If this eventuality is noted by the Project Officer will request aerial surveys in the Philippines. If so, it is desired that COMNAVSTA implement these surveys with appropriate aircraft if feasible, and make requisite arrangements with the appropriate authorities of the areas involved.

7. Program Details for Guam:

a. References (1) and (2) provided the schedule for the use of the Hawaiian/Midway fleet during aircraft from the IVY mission. Specific instructions and instructions for the IVY mission were provided by the AMC Project Officer during the recent visit to the Marianas.

~~SECRET~~
~~AIR MAIL~~

b. It is desired that Commander Fleet Air Hawaii support the program for Oahu using WV-1 aircraft as outlined in reference (h). Aerial surveys, if required, should be implemented upon direct request from the AEC Project Officer.

8. Reference (j) pertains to features of the subject program which are useful only for documentation purposes. Since the results of this feature are available only after laboratory analysis, it serves no use for immediate evaluation of local radiological conditions.

JOHN TASH FORD 1000 S. 10TH AVE
LOS ANGELES, CALIF.

ASSIGNMENT TOPIC: Geometry, Joint Task Force 8252

FROM: Commander, Northern Central
AFB 157, Inter-Island

FROM: NYBG (HAB1), ASB, Liaison Officer with JTF #4746

SUBJECT: Delay of Full-Out Data from J17 SURVE Weather Stations

1. I refer you to the attached memo which describes the origin of the subject data. These data will be utilized at JTF Hq to define radiometric fallout patterns following each detonation during CASUAL. To maintain a current fallout plot and estimate potential cumulative exposures at the weather stations, it will be necessary that this data be relayed to JTF Hq immediately after it is intercepted at the Weather Central.

2. It is requested that the fallout data (which will consist of the phonetic letters MIKE followed by two numerals or the letters MIKE, KASY, and CHARLIE, each followed by two numerals) as it is received at the Weather Central, beinstructed from each station be relayed by direct line teletype to the Staff Weather Office when JTF Hq is on FURY or to the Weather Central, HHCN (Flag Commandations) when Hq is absent.

TO: Commander, Joint Task Force 0500

**FROM: Commander, Weather Reporting Element
Test Services Unit, APO 147, Inter-Island**

FROM: NYOO (HNL), ASG, Liaison Officer with JTF 0500

SUBJECT: Transmission of Fall-Out Data from JTF 7 Bureau. (U)

In reference to the NYOO, ASG, automatic radiation monitoring equipment on Kure, Midway, Eniwetok, and Pamp, the following procedures will be requested of the resident A.W.S. personnel, subject to your approval, to begin on or about 20 February:

1. To observe and record dust and radiation data at 0500, 1200, 1800, and 2400 GMT daily.
2. To transmit the above data in the form of a single compressed report as an addendum to the scheduled meteorological transmissions at these hours.
3. To perform a brief operational check on the equipment daily and to report equipment failures to the JTF-7 HQ by administrative message.

Instructions will be given to the A.W.S. personnel when the islands are visited by Mr. Cassidy or myself for the next two weeks.

San Francisco, California

5 February 1955

MEMORANDUM FOR: Commander, Task Group 7.1
FROM: NYOO, ASD (NASL) Liaison Officer with JTF SEVEN
SUBJECT: Photographic Coverage of NYOO Fallout Project

1. In a meeting this date attended by Col. D. Miller, Lt. Col. J. Gaylard and myself, it was agreed that the following action picture coverage would satisfactorily depict the NYOO Fallout Monitoring Program and could be included in the schedule of TU-9:

a. Automatic monitoring station at Kwajalein (and at Majuro if TU-9 has another commitment there) equipped with TIS-3-A Duct and Gauge Monitor.

(1) Placing monitor and recorder cases in position outside of weather station.

(2) Removing covers from cases connecting electrical wiring.

(3) Inspecting monitor mechanism.

(4) Operator reading strip chart (close-up of needle movement), recording date in Log Book.

(5) Composing and transmitting message to HQ, JTF SEVEN.

b. Airborne monitoring operation employing P2V aircraft from VP-39 Squadron based on Kwajalein.

(1) Removing two scintimeters (survey instruments) from storage and carrying them aboard aircraft.

(2) Operator, with scintimeter, taking position aboard aircraft and checking instrument.

(3) P2V take-off.

~~CONFIDENTIAL~~

CONFIDENTIAL

(4) Operator using instrument in flight with view of atoll from aircraft. Close-up of needle rising. Operator entering data in log.

c. Scintanometer calibration.

(1) Ground survey at one of former shot islands (directly tell) employing scintanometer and G. W. Meter.

(2) P2V or helicopter pass over island. View from helicopter.

d. NYCO plotting desk aboard the Vlagship.

(1) Data message being delivered to desk, data being interpreted, data being written on wall chart.

(2) Wall map showing locations of monitoring stations.

e. NYCO instrument maintenance facilities on Perry.

(1) Spare parts storage.

(2) Engineer repairing automatic monitor.

2. The following information may be useful to you for planning purposes:

a. Items 1a and 1b (ground sequences) can probably be coordinated in one trip to Kwajalein. This can be planned for a brief period between shots. In-flight sequences will necessarily be arranged according to V-27 flight schedules.

b. Item 1c will occur in week preceding first detonation. Peak calibration can be performed for photographic purposes at a later date if desirable.

c. Item 1d can be accomplished any time Hq, JTF SEVEN is alerted.

d. Item 1e can be accomplished at photographer's convenience.

A. J. BRANTIN
Project Officer

1 February 1954

MEMORANDUM FOR: Staff Duty Officer

SUBJECT: Reception of Messages

Beginning on or about 20 February, and for the duration of the test series, I anticipate the reception at 6 hour intervals of both classified and unclassified priority messages containing fall-out data. These will be addressed: CJTF-7, Skiriston, pass to Mr. A. Berlin. I would appreciate the expeditious delivery of these messages to me during the active fall-out periods (which may continue up to 6 days following each detonation) aboard the Flagship when JTF 307 is ashore or in the Reg 1-3 Section on Ferry. I will inform you when the active period has terminated following each shot.

In addition to the above, there may be priority messages containing straight text addressed as above. I would appreciate having these delivered with minimal delay in off duty hours as well as regular working hours. This would apply to both active shot periods and intermission shots. My room is 45 in Wing, 121.
