	4. The principal spokesman for Bikinians, , a Wotje man											
	married to a Bikinian, then asked many questions others had posed.											
	He first apologized for "our ignorance and inability to comprehend."											
	Then said they had heard six days ago by radio that radiation is											
	dangerous at Bikini. I answered saying that I believed this must be a											
	misunderstanding based upon the DOI press release which was in itself											
	based upon misunderstanding. I stated that the present houses were											
•	sited along the lagoon road, as AEC recommended, and were built											
	generally according to AEC recommendations; that we have made											
	measurements inside and around these houses and find them safe so											
	long as our advice on foods and water is followed. I mentioned also											
	Dr. Conard's findings from recent surveys as further supporting our											
	conclusions.											
	5. then asked if Lawyer George Allen agrees. To my relief											
	and his credit, Allen said: "We often disagree with ERDA and generally											
	give cautious consideration to ERDA statements. On this matter,											
	however, we agree with Mr. Ray and ERDA. Our concerns are with											
	the Atoll as a whole and with what happens over 30 years or more."											
	6. There was then a lengthy discussion of poison fish at Eikini, with											
6 5	Neva and others asserting that many species which were edible "before											
ч Э	the bomb" now cause illness.											
Ş	7. I cited other examples of spontaneous appearance of ciguaterra at											
1	Fiji, Maui, and elsewhere and assured him that there is no radiation											
	problem with any Bikini marine life. I also told him of some of the											
	rules which can be followed to avoid ciguaterra poisoning, and informed											
Ð	him of University of Hawaii ciguaterra program. Again, I was pleased

to hear Mr. Allen say, "We at MLSC have complete confidence in the statements Mr. Ray has just made."

8. The minister then pointed out that even fish of the same species may be divided--some poison, some edible. He wondered if the poisonous ones may be feeding on radioactivity in the sunken crossroads ships. I again mentioned the University of Hawaii studies and our confidence that radiation is not the cause. Allen said that uncertainties such as this are what make M1SC say that ERDA's recommendations are premature. This passed without further comment.

9. Then in discussing his own role, Allen said, "I shall need your help. We know that you have always been helpful to those such as Mr. Ray and Dr. Gudiksen who are trying to help you." (The first admission that our efforts are constructive.)

10. expressed the concern of some who during the drought of 1974 had necessarily drunk groundwater. "What will happen to us?" I told him we were aware of that and had taken samples, that levels were not high enough for any concern except if consumed over long periods of time. His response: "Thank you for allaying our fears, but if we do get sick please remember us."

LOGAL

11. There followed some repetitious discussion for a total of about two hours. The spokesman then quite sincerely said, "I think there are no more questions. Your answers have been most satisfying." I thanked him and promised that we will continue our studies as long as they will permit us and will continue to visit as long as they welcome us. They all then sang, as we stood in front of the meeting,

a Ma Breat	Trishallese song "I long for my home." As	they sang, all adults
