Number of New Family Planning .....	4
Number of follow up on Family Planning .....	6
Total number of PAP Smear collected .....	264
Total number of children Immunized .....	397
Total number of Family Planning .....	38
Total number of Medical referral from outer island .....	15

COMMENTS:

Our work went on smoothly. Although we had to work late at night using flash light and lantern as to collect PAP smear and of course as you may see another problem was when transfer and compile records under the dim light.

For your further information the ship schedule was rather a rush one and it was very inconvenient for both your team members and the islanders. However at this point I wish to inform you that 85% of our work was successfully carried out.

In conclusion of this report I would like to extend our great appreciation and thanks to the Master of M/S Hilitohi and his entire crew members for their time effort and cooperation which given us during the trip.

Thank you

Esther. Harris,  
Public Health Nurse Supervisor,  
Marshall Islands
