

AEC

UNITED STATES  
 ATOMIC ENERGY COMMISSION  
 WASHINGTON, D.C. 20545

No. L-191  
 Tel. 973-3335 or  
 973-3446

FOR IMMEDIATE RELEASE  
 (Monday, August 12, 1968)

(NOTE TO EDITORS AND CORRESPONDENTS:  
 Dr. Glenn T. Seaborg, Chairman of the  
 U. S. Atomic Energy Commission, today  
 issued the following statement on AEC's  
 role in the decision to allow the former  
 residents of Bikini to return to their  
 atoll.)

It has been greatly satisfying to my fellow Commission-  
 ers and me to take part in the decision, announced today by  
 President Johnson, to return the Bikinians to their atoll.  
 The attached AEC report on the radiation survey of Bikini  
 was a cornerstone of that decision.

The report, which declares the atoll once again safe  
 for human habitation, represents the work of many highly  
 qualified men, including the scientific team which surveyed  
 the islands in 1967 and the special consultant committee of  
 experts who produced the report.

It has been just over 10 years since the last nuclear  
 test took place at Bikini on July 22, 1958. The intervening  
 years have brought a remarkable recovery on the islands, as  
 AEC sponsored research teams noted in both 1964 and 1967.

The 1967 survey was made at the request of the Secretary  
 of the Interior whose department is responsible for the wel-  
 fare of the Bikini natives. The Bikinians were moved from  
 their atoll in 1946 before the first nuclear test took place.

The team which visited the atoll in 1967 included radio-  
 logical and health physicists, marine biologists, a tropical  
 agriculturalist, an anthropologist and representatives of  
 the Pacific Islands Trust Territories, Department of the  
 Interior.

 FOLDER BIKINI SURVEY (310-MC2)  
07 THRU 12/1968

*I. R. Kiani*

Eight of the most highly qualified experts available were asked to review the survey material. After meeting with members of the survey team and examining their reports, these consultants reached the unanimous conclusion that it would be radiologically safe to allow the Bikini people to return to their home atoll.

While Bikini is best known as a weapons testing site, it has also contributed significantly to man's knowledge of the long term effects of radiation on an environment.

During the years when radiation levels were too high for people to live there permanently, the AEC sponsored several scientific studies on the atoll. In fact, Bikini truly served as a living ecological laboratory.

Before it was either a proving ground or laboratory, though, Bikini was a home land. Having been closely associated with nuclear energy, and Bikini, for all these years, I find it particularly gratifying now to take part in the atoll's return to usefulness as a home for the Bikinian people.

Copies of the technical data from the survey are available for examination at the Public Document Room in AEC's Washington office at 1717 H Street.
