

C-72-9876

PELLET PACKED WITH ENERGY... A single one-fortieth
an ounce, this fuel pellet inside the Fast Flux
Test Facility has the equivalent energy value of
50 pounds of coal. The Fast Flux Test Facility,
now under construction near Richland, Washington,
will contain over 2,500,000 of these mixed uranium-
plutonium pellets in the Fast Test Reactor core.
The facility is part of the Atomic Energy
Commission's Liquid Metal Fast Breeder Reactor
research program. (Credit: Battelle-Northwest)
