

an Jay & Gary -

Bill and I arrived in good shape
except they were awfully pale. In morning
I haven't written more after but
I and I hate to write but have to
write. Every thing is going smoothly here.
The weather is beautiful and the water
is warm and clear.

The AEC boys say hello to everyone
and are very curious about Ralph's
condition. They said to tell Ralph they
are starting preparations for the next
sing-away party -

He & spect. is working perfect Frank.
Jay & Joe found a new isotope yesterday,
Tb¹⁶¹. They were very curious about it
so I ran the sample (mouse skin) through
an & spect. Our & spect showed a .032 peak.

This of course did not agree with
their data, however we shall try to
in point it a little better. I would
very much appreciate if you would send a
list of the common isotopes we have
made plus their energy ratings. This
will give me a chance to better
my understanding of what's happening.

Say hello to everyone there and
hope to see you all real soon.
We are holding a room for Doc
and Dean Bunch at Bks 128.

Sincerely,

Don E. Art
