OCEANSIDE, NEW YORK

401066

Oct. 4, 1962

Mr. Will Siri
Donner Laboratories
University of California
Berkeley, 4, California.

Dear Will:

In reviewing the blood volume data on the Marshallese and Caucasians which we performed in 1961 and 1962, I find that there may be many errors since we based our normal values on ideal weight. As you have pointed out in the past these results are probably not valid as some subjects are either under- or overweight. We should therefore like to include total body water along with blood volume determinations which we plan to repeat in the 1963 survey. Could you supply us with tritiated water so that we can accomplish this test? As I recall, you made this offer back in 1961 when I visited the Donner Laboratories. I know you are a very busy man particularly in view of your impending trip to Mt. Everest but maybe you can take a moment (from one of your coffee breaks) to answer.

Please give my best regards to Jean and say "hello" to the Weavers and Nim Born. I don't think I have any other friends (?) left at Donner. If I should go through San Francisco on Feb. 14th I shall certainly call you even if you don't supply the labelled water.

Sincerely yours,

Leo N. Meyer, M.D.
