10 APRIL 1956

IN COMPLIANCE WITH ORDERS ISSUED BY
COMMANDER TASK GROUP 7.1, ALL PERSONNEL
ASSIGNED TO T.U. 7 (PARRY ISLAND AND HEADQUARTERS
UNITS) AS PER ATTACHED LIST, WITH EXCEPTION OF
CIVILIAN PERSONNEL ^{HAVE} REPORTED ABOARD PARRY IS-
LAND, ENIWETOK ATOLL, MARSHALL ISLANDS.

COMMENCED PRE-OPERATIONAL AND TRAINING PHASES.
CONTINUED PREPARATION OF FILM BADGES, DOSIMETERS,
AND RECORDS, CALIBRATION OF RADIAC INSTRUMENTS, RE-
CEIPT, INVENTORY AND STOWAGE OF RADSAFE CLOTH-
ING AND EQUIPMENT.

COMMENCED PREPARATIONS FOR TRANSPORTAT-
ION OF BIKINI ATOLL RADIOLOGICAL CONTROL
UNIT TO BIKINI ATOLL.

SCHEDULES FOR ONE-DAY AND TWO-DAY MONITOR'S COURSE

A. One-day course to be given 16, 17, and 18 April, 1956 from 0800 - 1200, and 1300 - 1400

- 0800 - 0900 Radioactivity and General Theory -- LTJG Brebst
 - a. Types of radioactivity
 - b. Units of Measure
 - c. Shielding and Decay
 - d. Medical aspects
 - e. Types of blasts to be expected
- 0900 - 1000 Rad Safe Procedures at PPG -- 2/Lt Milietes
 - a. Processing thru Rad Safe Building (Clothing, Instruments, etc.)
 - b. Check Points and Area access clearance
 - c. Monitoring
 - d. Time of stay
 - e. Decontamination and allowable contamination tolerances
 - f. Shipping of contaminated materials
- 1000 - 1100 Dosimetry and Records Procedures -- 1/Lt Mudgett
 - a. Film Badges
 - b. Dosimeters
 - c. Records
- 1100 - 1200 Instruments -- 1/Lt Peters
 - a. IC - AN/PDR 39
 - b. GM - AN/PDR 27 or MX - 5
 - c. Special purpose instruments
- 1300 - 1400 Instrument Use -- 1/Lt. Peters
 - a. Calculation of expected intensity
 - b. Stake line survey
 - c. Determination of percent error
 - d. Personnel Monitoring

B. Two-day course to be given 16 and 17 April, 1956 from 0800 - 1200, and 1300 - 1700

- 0800 - 0900 Orientation -- Maj Weaver (SigC)
 - a. Necessity for Rad Safe
 - b. Concepts of Rad Safe
 - c. Organization for Rad Safe
- 0900 - 1000 Structure of Matter and Radioactivity -- LTJG Brebst
 - a. Structure of the atom
 - b. Proton, neutron, electron and basic particles
 - c. Formation of atoms, isotopes, etc.
 - d. Natural radiation
 - e. Induced radioactivity
- 1000 - 1100 Radiation Units, Shielding and Decay -- LTJG Brebst
 - a. Units
 - b. Shielding
 - Decay
 - d. Protection
- 1100 - 1200 Medical Aspects of Nuclear Radiation -- 2/Lt Milietes
- 1300 - 1500 Photodosimetry and Pocket Dosimeters -- 1/Lt Mudgett

COPIED/DOE
LANL RC

18

1500 - 1700 Instrument Theory and Special Instruments -- 1/Lt Peters

Second day

0800 - 0900 Dosage and Time of Stay -- 1/Lt Mudgett

0900 - 1100 Instrument Familiarization -- 1/Lt Peters
a. Calculation of expected intensity
b. Shop calibration
c. Determining instrument error

1100 - 1200 Rad Safe Procedures at PPG -- 2/Lt Milletes
(Same lecture as in one day course)

1300 - 1700 Practical Exercise in Rad Safe Procedures -- LTJG Brobst & 2/Lt Milletes

Lecturer Assignments

STATEMENT ON TAXI ACCIDENT ON GENE AIRSTRIP, ENIWETOK ATOLL, M.I.

At approximately 1400 hours while making a Rad-Safe survey of the Eniwetok Atoll, I directed Lt. Sancton to set his aircraft down on the Gene airstrip. I desired to make a ground reading and to monitor one of the vehicles adjacent to the strip whereby I could determine the feasibility of an evacuation schedule to Elmer for these vehicles. After Lt. Sancton landed on the strip, I informed him I wished to check the vehicle adjacent to the dispatchers tent. Lt. Sancton then taxied his craft onto the pad in front of the dispatchers tent. In doing so he struck the creosoted pole in front of the tent with the tip of his rotor blades. Following this he radioed for another craft, secured his own aircraft, and collected the pieces of rotor blade knocked off in striking the pole. Upon arrival of the second craft, we were all evacuated to Elmer. Members of my unit accompanying me were 1st Lt. F. N. Peters and SP 3 W. H. Trachsel whose statements are attached.

ALPHA INCIDENT

For P&B LOG.

On 28 May at 1620 Lt. Miliotes was informed that someone was interested in finding out Rad Safe tolerances for alpha radiation. He was instructed to call Col. Pinson at a Fred number.

Lt. Miliotes talked to the colonel for several minutes and gave him the following information:

- 1) Contaminated surface - 500 cpm or more.
- 2) Air contamination $8d/m^3$ air.
- 3) Wear respirator if in doubt.
- 4) He did not know the figures for total body burden.
- 5) He would help if they wanted him to monitor the equipment that was contaminated.

Col. Pinson remarked that he was going to monitor the aircraft himself and that no help was needed. He wanted to know how large an area should be swiped for a swipe sample. Lt. Miliotes could not satisfy him on this point or on the point as to what constituted a total body burden for alpha. The colonel said he would try other sources for the unanswered questions.

It should be emphasized at this time that this is the only time that TU-7 was officially called in on this question. Everything that follows in this report was TU-7's attempt to get the facts straight and to help if possible.

On 29 May, Mr. C. Schlaer of LASL came in and said that he had heard that TG 7.4 was having a big problem with alpha contaminated aircraft and that they may need help. Lt. Ryan called Capt. Nichols at TG 7.4 and he was told that they got readings of 500 cpm and 1500 cpm off swipes on the aircraft. Capt. Nichols said he was satisfied with these readings and was not worried.

A little later that morning Lt. Jameson, TG 7.4 had S&C, called and said that they were considering taking urine samples from the people exposed to these aircraft. He wanted to know if TU-7 could process them. He was told that TU-7 did not have the facilities for this but that the samples could be sent to LNL and processed there. This was finally dropped when Capt. Nichols decided that no urine samples will be taken.

At about 1300 on 29 May, Mr. William Kennedy of H Division, LNL, came to TU-7 and said that he had heard various rumors about alpha contaminated aircraft. At this time he offered his help as an advisor if needed. He called Col. Pinson but was unable to reach him. He finally talked to Lt. Jameson. After the phone conversation Mr. Kennedy said that he was satisfied that there was very little to worry about.

COPIED/DOE
LANL RC

72

On the 29th of May two (2) TU-7 monitors were sent to the shot island to make a general survey (beta-gamma). They also took a converted thyac and were unable to detect any alpha contamination at 300 ft. from ground zero. They were unable to go any closer to ground zero due to the beta-gamma dose rate.

Several people were in close to ground zero on 30 May and their booties were checked for alpha contamination. These booties showed readings between 600 - 800 cpm on the thyac. A survey performed on 3 June showed very little alpha contamination (200 cpm in places).
