STATUS REPORT NO. 7
ENIWETOK RADIOLOGICAL SURVEY
JANUARY 20-26, 1973

This report summarizes activities and results of the radiological survey in progress for the period January 20-26, 1973.

Attached is the list summarizing progress since last week. The biota survey will probably complete on schedule this coming week. The soil survey is also on schedule and all should complete their work by February 21.

There was a medical emergency on the atoll on January 22. One of the site support contractor personnel suffered a heart attack. The onsite medical doctor ministered aid to the man immediately. When the man was safely evacuated, approximately nine hours later, all his vital signs were stable.
