March 25, 1966

Mr. Will Siri,
Donner Laboratory,
University of California,
Berkley 4, California.

Dear Will:

Under separate cover I am returning to you the Tritiated water which we used on 12 subjects on the island of Enitwetok. I am also sending you in the same package samples of plasma from each of these persons. These were drawn between 4 and 5 hours after oral administration. Attached to this letter are the names, ages, heights and weights of each of the volunteers.

We had an interesting but short trip. The blood volume studies were only incidental to the major purpose of our survey. Actually, we were more concerned with the hyper-coagulability of coconut crab serum. Unfortunately, my trip did not take me through San Francisco and I regret not seeing you and your family and the Weavers.

As you might expect, we are very busy here and I am enjoying my work immensely.

With kindest regards,

Sincerely yours,

THE LONG ISLAND JEWISH HOSPITAL
QUEENS HOSPITAL CENTER AFFILIATION.

Leo M. Meyer, M.D.
Hematologist in charge.
