COL-57-11

19 February 1957

The following proposal is an attempt to draw a comparison of the advantages and disadvantages of the geographical areas concerned in connection with the field testing programs of the University of California Radiation Laboratory at Livermore. Although it is written primarily from this point of view, it is hoped that, if approved, this effort could serve another useful purpose and become a framework and guide for detailed support planning and the evolution of an operational plan for the localities involved.

Dr. Harry Keller and Dr. Way Shelton have aided greatly in the preparation of the proposal.
