Mr. Seth Woodruff
Las Vegas Operations Office
Mercury, Nevada

20833

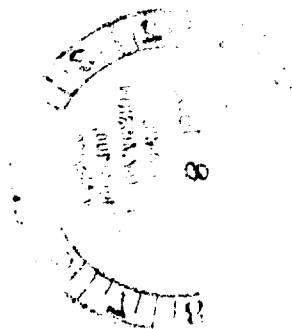

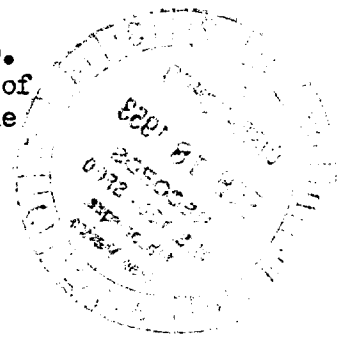

Dear Seth:

This will confirm Colonel Hartgering's letter to you of 25 June 1952, in which the permissible radiation dosage for the roll-up operations was specified as 3 roentgens, gamma only, for a ten-week period and with areas showing greater than 10 milliroentgens per hour being found as contaminated and requiring presence of a monitor for film badges and the other accessories for work in contaminated areas.

Sincerely yours,

/s/ John

John C. Bugher, M.D.
