

MESSAGES RE SIRT NO. 1:

411542

1. Number: Unnumbered
Date: March 3, 1954
Time: 0017Z
From: CJTF-7, ENIVETOK, MI

RG 396
Collection Dir of Operational Safety - T. McCraw
Box 1, JEP 1320
Folder 3, Rongelap-Nerik files

To: CSNSA DEPTAR WASH DC, CHAIRMAN AEC WASH DC (DEPTAR PASSES)
Subject: H + 48 hour advisory. Surface readings at Rongelap; weather detachment evacuation; skin readings; no symptoms evident. Rongerik reading; aerial survey of Utirik.

2. Number: Unnumbered
Date: March 3, 1954
Time: 0530Z
From: CTF-7.1, ENIVETOK, MI VIA LOS ALAMOS
To: Higher

Subject: Heavy fallout East of Bikini; 20 weather personnel evacuated - their film badge readings; some natives Rongelap and Utirik evacuated; estimated theoretical maximum infinity dose, Rongelap; actual doses to be estimated on completion of evacuation and information sent.

3. Number: Unnumbered
Date: March 3, 1954
Time: 1155Z
From: CJTF-7, ENIVETOK ATOLL, MI
To: CSNSA WASH DC, CHAIRMAN AEC WASH DC

Subject: H + 60 hour advisory. Evacuation of Rongelap; decontamination of natives; dosage estimates. Rongerik weather detachment dose estimates. Belief danger to Marshall Islands passed.

Date: March 4, 1954
Time: 0600Z
From: CJTF-7, ENIWETOK, MI
To: USAEC LOS ALAMOS PASS TO FIELDS FROM CLARKSON
Subject: Release in Hawaii papers on first test hard to find. News rendered unsensational.

12. Number: S-31
Date: March 4, 1954
Time:
From: FT. JDS. MA

12-A: Number: JF 4563
Date: March 4, 1954
Time: 0601Z
From: CAG 7.1 ENHMETOK MI FROM PRESS
To: CHIEF ANREP WASH DC
Subject: Suggests possibility of sending medical research team to study exposed personnel.

Subject: Arrangements made to dispatch medical team and equipment

14. Number: NR C-115
Date: March 4, 1954 (CODE P 050010Z)
Time: 0010Z
From: CAG 7.1, ENHMETOK (From Gordon Daming)
To: USAEC WASH DC FOR SIGNER
Subject: 154 natives of Utirik evacuated H +78 hours. Estimated dose. Height examination reports no present indication of illness. Will follow through higher request for urine samples.

15. Number: NR S-133
Date: March 5, 1954
Time: 1045Z
From: CJTF-7, ENHMETOK
To: CINCPAC
Subject: AEC-DOD desire to send biomedical research team to study natives exposed to radiation. If concur, please inform senior representative to High Command Territory Pacific Islands.

16. Number: NR 8-132
Date: March 5, 1954
Time: 1050Z
From: CJTF-7, ENIETOK
To: CHIEF AFSWP WASH DC
Subject: Kwajalein has only small dispensary type facilities. Task Force cannot provide radiological instruments. Suggests medical team bring what is necessary. JTF-7 will notify High Commissioner Trust Territories.
17. Number: NR 94-S
Date: March 5, 1954
Time: 1545Z
From: EISENBID, NYCO, AEC
To: USAEC WASH DC ATTN BUGHER
Subject: Relays quotes from Breslin message of March 5. Patterns executed. RadSafe estimates of exposures. Height examination of natives reports no evidence radiation sickness at present.
18. Number: OUTGOING
Date: March 5, 1954
Time:
From: BUGHER
To: CLARKSON, CJTF-7
Subject: Dunham and LeRoy on medical team. Requests permission for both men to have as direct communication as possible with this office.
19. Number: OUTGOING
Date: March 5, 1954
Time:
From: BUGHER
To: GRAVES, CJTF-7
Subject: Need more exact information re number of people who vomited or were acutely sick before island evacuation; number people evacuated from each island; number chronically ill before 2/28; seasickness aboard ship;

Date: March 8, 1954
Time: 1330Z
From: CINCPAC
To: BUGHNER
Subject:
30. Number: CITEGOFIG
Date: March 8, 1954
From: Bigher
To: Commander, JTF-7
Subject: LeRoy and Dunham enroute as personal representatives. Both will assist Graves and Clarkson as necessary. Requests they have opportunity to study and evaluate medical problem and utilize to the best advantage the medical team.
31. Number:
Date: March 10, 1954
Time: 0254Z
From: US NAV RAD DEF LAB SFRAN
To: CJTF-7, ENIWETOK AND CTU-13 (ATTN. CRONKITE)
Subject: USNEDL prepared to study and follow-up domestic animals if available from project 4.1 test area. Advise.
32. Number: NR S-234
Date: March 10, 1954
Time: 0603Z
From: CJTF-7, ENIWETOK
To: CHAIRMAN ABC WASH DC VIA LOS ALAMOS
Subject: Clarkson report to Fields and Bigher as of 101200. Dunning visit to Kwajalein: investigated health of natives. Original report about 20 natives sick first and second days based on their own statements, which are difficult to evaluate. No natives actually observed sick by medical personnel except 1 case of vomiting the first day aboard evacuee ship from Rongelap. Practically all Rongelap natives had

32. Subject (continued): skin itch. Itch ceased when decontaminated. No skin symptoms or signs yet. Erythema difficult to detect on native skin. Highest gamma reading (from hair) 400 milliroentgens per hour about about H+56 hours. Repeated washings have reduced readings to 7 milliroentgens per hour. Washings will continue. No estimate of beta dose. Average initial white blood counts at H+55 to H+75 was 7700. Repeat counts at H+158 was 5300. Greatest variance in white blood counts from Rongelap 24300 about H+75 hours, to 3700 H+130 hours, to 6000 H+158 hours. Another 60-year-old native white blood count H+55 was 12600, at H+68 was 6400, and at H+192 was 2900. Prognosis of Rongelap group depend upon further studies. Greatest variance white blood counts weather personnel Rongerik 10000 about H+32 hours to 5300 H+114 hours.

Great efforts being made to keep natives comfortable on Kwajalein. They are contented. Utirik group will be sent to nearby island Ebeye when High Commissioner directs and studied intermittently. Rongelap group retained Kwaj for intensive study by AEC/DOD research team. No decision as to time of return to home islands. Recommend wait until after series completed then re-check radiation levels again.

Estimated activity microcuries per square mile at time of fallout: Rongelap 3 at H+6 hours, Rongerik 2 at H+8 hours, Utirik 0.17 at H+16 hours. Soil and water samples being collected. One set water measurements at Rongelap showed concentration at D+3 days from 2 to 28 times above 5×10^{-3} . Team receiving excellent cooperation at Kwajalein.

33. Number: OUTGOING
Date: March 10, 1954
From: BUCHER
To: CJTF VIA LOS ALAMOS - FOR CROWKITE
Subject: Shipman at Los Alamos will do plutonium analysis urines. Selected 24 hour specimens highest exposure group preferable. Will give essential data ratio external internal hazards. Shipmanx also can furnish limited number additional personnel if needed.

(Pl. Berg of Group read and -abstracted
all items to date: Items 1 thru 33)

34. Number: Ongoing From Navy

Date: March 10, 1954

Time: 1900Z

From: VAN C TIPTON CAPT MC DEPT OF NAVY WASH DC

To:

Subject: Suggest Cronkite be advised concerning USDL desire to study possible internal effects in animals from forward area by dispatch to CDR JTF-7 c/o TU 13 Allen Cronkite KWAJALEIN.

35. Number:

Date: March 10, 1954

Time: 0649Z

From: NAVSTA KWAJALEIN (LeRoy)

To: USAEC WASH DC ATTN BARNER

Subject: Cronkite team organized in JTF-7 as Project 4.1 of TU-13 of IG 7.1, Scientific group. It is set up in adequate quarters, well supported by local command. Natives are properly treated. Their morale is good. Tobin, anthropologist for High Commissioner is most helpful. There are 4 exposure groups. Rongelap group, 65 natives, estimated dose 125r. Rongerik group, 23 Americans, dose 85 to 95r. Alinginae group, 17 natives, dose 74r. Utirik group, 154 natives, dose 10 to 20r. Today only Rongelap group has signs of injury. There are no symptoms. Findings consist of just significant reduction of white count. Daily situation report will be filed by Cronkite with our concurrence.

36. Number: S-02TA

Date: March 9, 1954

From: IASL SHEWAN

To: FISHER

Subject: Following is boiled down version of what IASL has received, with some of IASL's thoughts as to what it means. Party remaining on MAN noticed radiation level rising at H+20 minutes. We understand this level reached 4Cr per hour and possibly higher. Rapidity of arrival of activity would indicate some mechanism other than wind borne fallout. Party on MAN remained in building and were evacuated H+40. Helicopter survey at H+4 showed following levels in r per hr: From 25 foot altitude, Fare 0.4; Sugar 1.5; Cboe 3.5; Man 10; from

36. Subject (continued):

100 feet altitude, George 50; Fox 3; Dog 1; from 200 foot altitude, Charlie 10; Party landed on Dog at H-11 finding level estimated 80r per hour. We understand that most of the ships experienced moderate fallout but have no numbers. We have no results to indicate rate of decay on atoll.

Fallout traveled on an approximate line from Fikini to Bikar Atolls and was reported approximately 200 miles south of Hawaii at H-56 with intensity of approximately 0.04 mr per hour between 12 and 29000 feet. Reading at Rongelap at H-36 reported as 1.4r per hour. It was assumed that fallout started at Rongelap at H-3 hours. Natives were evacuated by H-31. Three nuclear USAF weather detachment Rongerik received estimated dose 98r on basis of one film badge; these people lived in tent. Four film badges representing remainder of personnel in metal barracks averaged 4r. Weather detachment evacuated H-36. Aerial survey of Utirik at approximately H-34 indicated ground reading of 0.6r per hour. Natives from Utirik evacuated by H-73 with estimated dose 17r.

It would appear that the weather played a dirty trick as we have seen it do in the past. We feel it quite important to do urine assays for plutonium on representatives of the groups receiving the higher exposures. This should give valuable data as to ratio between internal and external hazards. We would like to do some of these assays if we can be furnished 24 hour specimens. We can furnish limited number additional personnel if needed. I hope you will keep me advised as to any help we may offer.

37. Number:

Date: March 10, 1954

From: LASL SHIPMAN

To: BICHER

Subject: Re making urine assays of exposed personnel. Requests, if Bigher approves proposal, that he advise Cronkite. Payne Harris and Shipman to leave for Kwaj at end of week.

38. Number: 041003
Date: March 11, 1954
From: BURLER
To: CJTF-7 ENHETOK VIA LOS ALAMOS FOR CROWKITE
Subject: Shipman and Harris of LASL arriving soon for special urine samples. Will bring containers for consecutive 24 hour collections.

39. Number:
Date: March 11, 1954
Time: 2301Z
From: NAV STA KWAJALETI SIGNED LEROY
To: CJTF-7 ENHETOK (INFO TO 36H R)
Subject: Cannot agree that psychological reasons should determine disposition of Rongerik group. Cannot agree with clinical judgment that these men return to duty. Earliest possible men should be studied by Project 4.1 to obtain maximum amount of information on FOX PETER metabolism and other aspects of radiation injury. Native groups are not satisfactory for metabolism and other studies because of taboos, language, and other diseases. Rongerik group essential for mission of Project 4.1. Request they be transferred to this station at once.

40. Number: NR C-256
Date: March 12, 1954
Time: 0514Z
From: CJTF-7 VIA LOS ALAMOS (RESLEN)
To: USAEC NY (INFO TO LOS ALAMOS)
Subject: 500 LB samples can be obtained subsequent next event from either Bikini or one of recently evacuated atolls. Bikini sample can be scheduled in regular recovery operations. Other will require special surface vessel trip. Is there a preference regarding location?
(very for Eisenbud).

(For Eisenbud) Gunned ~~in~~ film supplies never sent to Rongerik. Soil and water samples will arrive LaGuardia via Flyaway 23 scheduled depart forward area H-36. Suggest you contact JTF-7 rear for ETA New York. Accompanied by Graves, checked scintimeter against several Bikini islands on March 8. Graveson prepared curve which includes much on previous available calibration data. Believe curve valid for expected altitudes.

41. Number: PR 64-5

To: OMA AEC WASH DC

Subject: After receiving advice from my staff surgeon, radiological safety adviser and scientific director, I have authorized a maximum permissible exposure (limitation) to a limit of 7.8r (gamma only) which may be required at any time during the 13 week period of the operation for a limited number of critical Naval personnel. My radiological safety regulations which have been approved by the Departments of the Army, Navy, Air Force, and by the AEC contain the provision "the MDS and LIS are subject to revision or waiver from the Task Force Command in individually designated cases when circumstances indicate the need and justification therefore". The same regulation referred to above contains authority for LIS of 20r (gamma only) for the operations period for crew members of sampling aircraft.

The personnel for whom the LIS has been increased to 7.8r includes the following: 30 helicopter pilots and plane captains; 120 boat operating personnel of boat pool; 75 flight deck crewmen of USS Bairoko, and 263 crew members of USS Phillips (DDM498).

I propose additionally to increase to the same limit a small number of individuals not members of critical groups listed above who already have received more than 3.5r but less than 7.8r and who will be so employed as to minimize probability of further exposure.

It is planned that in the future the Phillips will not be in the vicinity of the shot atoll except in emergency.

Many of them will be able to assign personnel with dosages of 3.9r or more to activities requiring minimum or no exposure. In the interests of efficiency and continued progress and cost involved, coupled with the relative insignificance of any doses in the region of 7.8r, plan to continue using these personnel.

40. Number: SAC 9001
Date: March 21, 1954
Time: 2359
From: NAVSTA IPNAJ
To: AEC WASH DC

Subject: Received from Haupt. Dick Johnston all set. Receiver on Bairoko. Might fail to receive if Bairoko has to move out to large distance or if delay cause battery failure. Dunham sends.
