SUMMARY OF THE REPORT ENTITLED "MEDICAL SURVEY OF RONGELAP
PEOPLE FIVE AND SIX YEARS AFTER EXPOSURE TO FALLOUT"

SYMBOL: BMA:RCB

Attached is a summary of the report entitled "Medical Survey
of Rongelap People Five and Six Years after Exposure to
Fallout" and a copy of the original report.

It was suggested that the Commissioners and members of the
Joint Committee might find this report and summary of interest.
Accordingly, a memorandum to the Commissioners and a letter to
the Joint Committee are attached with copies of the report and
summary if it is determined that they should be forwarded.

In brief, the Marshallese are not showing clinical signs and
symptoms or abnormalities clearly attributable to their 1954
exposure. They continue to show, however, low body burdens of
Sr⁹⁰, Cs¹³⁷ and Zn⁶⁵, all of which we believe to originate from
the contamination in their current food supplies; the Zn⁶⁵ is
believed to come from the seafood caught locally.
