Duncan Curry  
Deputy for Administration TG 7.1  
Los Alamos Scientific Laboratory  
Los Alamos, New Mexico

In order to interpret the information obtained from Sandia Corporation's blast records on Operation Ivy, it is desirable to have the air temperature, barometric pressure, wind velocity (speed and direction) and relative humidity along the atoll from zero through Elmer for the Mike shot and on Yvonne and Elmer for the King shot immediately preceding shot time.

It would be appreciated if you would forward us any information you have that might be usable.
